Mrs Sarah Bright

Quality Manager

Ansford Manufacturing Group

Dear Sarah

Re: Process capability study required for PB-1140 spigot OD critical characteristic

Thank you for your continued support on the PB-1140 pump body programme. As you are aware, we are preparing to sign off the revised PB-1140 specification (drawing PB-1140 rev E). Before we are able to do so, we require evidence that the spigot outside diameter can be manufactured consistently within specification.

The spigot OD is a designated critical characteristic, nominal 12.000 mm with a lower specification limit of 11.940 mm and an upper specification limit of 12.060 mm. Accordingly, we ask that Ansford submit a process capability study on this characteristic before specification sign-off can proceed.

The study should meet the following requirements:

- A minimum of 30 subgroups of 5 consecutive parts, drawn from normal production.
- A demonstrated Cpk of 1.33 or greater on the spigot OD.
- Results reported on the attached form QF114.
- The measurement system used must hold a current calibration certificate and a gauge R&R result of 10% or better.

We would be grateful to receive your submission during the week commencing 06/07/2026. Please return the completed form QF114 to me at the address above, or by email, and I will arrange for our engineering team to review it promptly.

Should you have any questions regarding these requirements, please do not hesitate to contact me. We look forward to receiving the study and to concluding the specification sign-off.

Yours sincerely

Rachel Hardy
